

I would like to suggest the rejection of petition 04-160. My opinion is that satellite radio gives the consumer more choices and limiting the ability of satellite radio companies to deliver traffic and weather will reduce my choices for this information.

While the programming may be targetted to specific cities, it is broadcast to the nation. This is like saying that any national oriented show with city specific information could be subject to this ruling. Would the weather channels city by city national forecast also fit into this category.

As a consumer I want to have as many choices as possible. Please reject petition 04-160
